Udemy - 2022

EDUCATION

- Bachelor degree in naval architecture
Federal university of Pará
Jan 2015 - Dec 2019

NOTES

- I started programming in 2013;
- I worked for 3 companies during college;
- I decided to change my career to development when I noticed I was standing out in the companies I worked mainly because of my tech skills;
- Open-source contributor/enthusiast.

EXPERIENCE

> INSTIGARE MÍDIA | Full stack developer (remote)

Ecommerce stores management company | São Paulo, SP, Brazil

April 2021 - Present

- Developed a complete solution for tracking ecommerce competitors sales, so we could see which products and marketing strategies were doing better. In three months it detected **18M USD in sales** for 400+ stores, and helped the company to **double revenue** applying the knowledge we acquired with the data; [link](#)
- Developed a web data analytics tool system similar to Google Analytics, where we implemented a front end pixel that collects visitors' online behavior and sends information to a google spreadsheets, so we could use **data analysis** to show better offers and convert them into actual customers, all this under the GDPR law; [link](#)
- Developed an API for internal usage to **automate tasks**, such as searching the products prices on the supplier's website, notifying customers in Whatsapp, among others. [link](#)

> MARITIMUS ENGENHARIA | Full stack developer

Naval architecture & software on demand company | Belém, PA, Brazil

September 2020 - April 2021

- Automated most of the internal process, such as adding VBA to excel spreadsheets, which made our engineering projects incredible faster (**saving about 4/6 hours** in each project);
- Developed the company's portfolio website with an API for internal usage, such as to allow only specific people to use these spreadsheets; [link](#)
- Developed on demand desktop apps in electronJS and websites for our customers, mostly in ReactJS.

> APPSUPER | Backend developer (remote)

Supermarket orders delivery startup company | São Luís, MA, Brazil

March 2020 - September 2020

- Suggested and implemented an electron chatbot to automatically contact customers when needed, **reducing a lot the support daily work**; [link](#)
- Developed a web dashboard to show the company's internal **KPIs in real time**, allowing our leaders to detect what markets and products were doing better, and with that information focus our energy on what really matters;
- Developed a browser extension to the fraud analysis team to **boost their analysis speed**, it was crucial when our per day orders **increased 300%** in May 2020.
